Homework 22

MEV

1. Listen to the mempool using ether.js (or similar web3.py etc), you can use the code from the lesson.
2. Can you find a way to filter your mempool listener and get only pancake swap transactions?
3. How might you mitigate MEV & front running if you were building your own Dapp?
4. Have a look at the example sandwich bot and see make sure you understand how it works [Repo](#).
